Taskwarrior Cheatsheet

Unique Features

- Command-line task manager
- Supports task prioritization and due dates
- Supports task annotations and tags
- Supports recurring tasks and dependencies
- Can be extended with plugins and hooks
- Available on most operating systems

Basic Usage

- Add a task: `task add [description]`
- List tasks: `task list`
- Complete a task: `task [task_id] done`
- Delete a task: `task [task_id] delete`
- Modify a task: `task [task_id] modify [attribute]=[value]`

Advanced Usage

- Filter tasks by status: `task [status]`
- Filter tasks by project: `task project:[project_name]`
- Filter tasks by tag: `task +[tag_name]`
- Filter tasks by due date: `task due.before:[date]`
- Filter tasks by priority: `task priority:[priority_level]`
- Recurring tasks: `task add [description] recur:[recurrence_interval]`
- Dependencies: `task [task_id] modify depends:[task_id]`
- Hooks: `task config hook.[hook_name].command [command]`

Output Options

- Customize output format: `task [filter] rc.verbose:[output_format]`
- Set default output format: `task rc.defaultwidth=[width] rc.defaultheight=[height] rc.defaultcommand=[command]`
